

Models of Multi Disciplinary Care

Macarthur Multi Disciplinary Team

Health
Western Sydney
Local Health District

Before

Aims of the group

- Holistic approach to the care of the person with MND.
- Team effectiveness.
- Brainstorming.
- Partnerships.
- Enhances the skills of the service provider working with the client

MEET THE TEAM

How it works

- The team meets every 2 months.
- The staff rehab specialist is able to attend to home visits when required.
- Cost effectiveness.
- Engaging both Allied Health and Community in partnership.

Strengths of the model

- People with MND get better care as each team members advises appropriate person if condition deteriorated and need for review
- More streamlined service for members as all team members are working together and not in silos
- Lack of duplication of service
- Gives a forum to debrief with colleagues

Strengths Cont.

- Professional development for all Team members as we learn from each other and a great forum to disseminate appropriate information – mentoring base for new staff
- Pooling of resources
- More effective communication between health professionals
- Strengthens partnerships through more regular contact with Service Providers

THE END
